

NAME OF INSTITUTION	P.M. REPORT NO. & DATE	CONDUCTED BY (MEDICAL OFFICER)	DATE & TIME OF RECEIPT OF BODY	DATE & TIME OF COMMENCEMENT	TIME OF COMPLETION OF AUTOPSY	INQUEST EXAM TIME (BY POLICE)
District Medico-Legal Center & Morgue	PM-619 / 2026 15/09/2026	Dr. Tanish Walture, M.D. Reg. No. WBMC/45826	15/09/2026, 10:00 hrs	15/09/2026, 10:45 hrs	15/09/2026, 12:15 hrs	15/09/2026, 08:00 hrs

CASE PARTICULARS & IDENTIFICATION

Name of Deceased:	Unknown Subject #42	Age (Approx):	Approx. 35 - 40 Years	Sex:	Male
S/O, D/O, W/O:	Not Known	Residential Address:	Recovered from outdoor perimeter	Station:	New Township P.S.
Body Brought By:	SI R. K. Mandal, New Township P.S.	Identified By:	Unidentified at commencement; Inquest identification by Police	Challan No:	CH-892/26

SCHEDULE OF OBSERVATIONS (PHYSICAL & POST-MORTEM CHANGES)

1. Height & Weight:	Height: 172 cm Weight: 68 kg	2. Physique:	Average built, moderately nourished	3. Clothes & Belongings:	Soiled cotton garments, intact footwear
4. Identification Marks:	Old linear scar on forearm; unidentifiable tattoo	5. Rigor Mortis Status:	Rigor mortis completely passed off (absent throughout body).	6. Scene Ambient Temp:	23.5°C (ADD: 189.6)
7. Postmortem Changes & Decomposition:	Stage: Bloat / Active Putrefaction. Greenish-black discoloration over abdomen; superficial venous marbling; abdominal gas distension (bloat); postmortem purge fluid at nares.	Natural Orifices:	Corneas hazy, collapsed. Purge fluid at mouth & nose.	Hypostasis:	Indistinct due to hemolysis and discoloration.

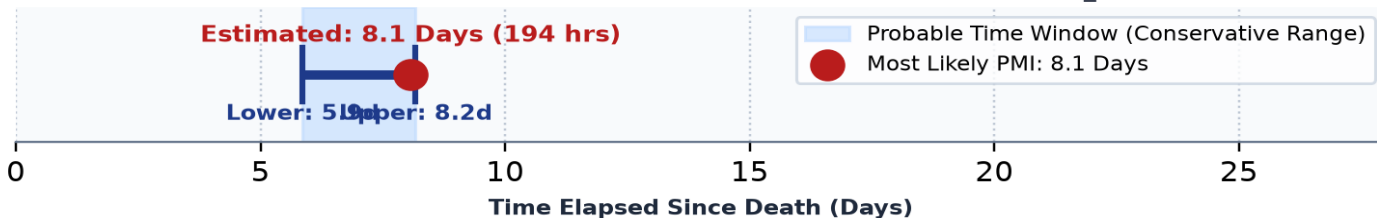

MICROBIAL SUCCESSION ANALYSIS (POST-MORTEM BIOLOGICAL CLOCK)

Swab Specimen:	Oral Cavity Swab (Specimen Ref: SAMP_0042)	Specimen Adequacy (DNA Yield):	SATISFACTORY — High DNA Recovery (28,410 bacterial reads verified; test fully valid)
Biological Profile:	Active Putrefactive Flora	Laboratory Specimen Barcode:	NT-LAB-0042 (Evidence Seal Intact)
Microbial Examination Finding:	Putrefactive bacteria predominant. Biological succession pattern confirms active internal decomposition, gas production, and tissue liquefaction.	Analytical Method:	Metagenomic Necrobiome Clock (Quantitative Succession Profiling)

OPINION AS TO TIME AND CAUSE OF DEATH

1. PROBABLE TIME SINCE DEATH:	8.1 DAYS (approx. 194 Hours prior to examination) PROBABLE FORENSIC WINDOW: 5.9 to 8.2 DAYS prior to discovery. ESTIMATED CALENDAR RANGE OF DEATH: 06/09/2026 to 09/09/2026 (Most Likely: 06/09/2026)	Basis of Timing:	Based on integrated clinical autopsy evaluation (rigor mortis state, putrefactive bloat and marbling) concordant with calibrated microbial succession bioindicator sequencing under prevailing scene temperature.
2. CAUSE OF DEATH:	ASPHYXIA AS A RESULT OF CONSTRICTION OF NECK (PENDING TOXICOLOGY & HISTOLOGY).	3. MANNER:	Matter under judicial inquiry / Forensic Inquest.

ESTIMATED TIME-OF-DEATH RANGE — SPECIMEN REF: SAMP_0042

SPECIMENS COLLECTED & HANDED OVER TO POLICE

Viscera Preserved:	Stomach with contents, portion of liver, kidney, blood sample for chemical analysis.	Microbial Swabs:	Two sterile oral/nasal swabs preserved for metagenomic DNA reference.
Clothes / Articles:	Personal garments sealed in labeled packet.	Sample of Seal:	Distinctive seal impression affixed below.

Certified to be True Copy

Officer-in-Charge

New Township P.S.
Police Commissionerate Seal

Official Medico-Legal Attestation:

I hereby certify that I have conducted the post-mortem examination on the deceased body mentioned above. The findings, autopsy observations, and metagenomic succession intervals recorded represent a true and objective scientific record.

Signature of Medical Officer:

Dr. Tanish Walture, M.D., M.D.

Medical Officer & Forensic Specialist
WBMC / 45826
District Medico-Legal Center / Government Hospital
